## JOOMLA

### 1. My Parcel Guru

URL: <http://www.myparcelguru.com>

#### Technology:

**Language:** PHP 5.2      **Database:** MySQL 5.0

**Package:** Joomla 1.5.14      **Payment Gateway:** Paypal

#### Description:

The Website offers an enriched user experience. It is a multilingual parcel service and gift store built around Joomla 1.5 and SH404 for SEO urls with PHP 5.2 language and My SQL 5.0 database. The payment gateway is Paypal. Template design and integration have been done. There's a registration page with six-step sign-up process. The registration has mobile verification. There's a shopping page where admin can manage products list from the admin side. The site has a secure registered area for users where they can manage their transactions of Parcel/Courier. There is Google translator included for language option. We have integrated Parcel API for tracking and mapping detection. The user can buy products from the website and parcel them to whoever he wishes. The ShopZilla module for shopping page and the site gets products feed from shopping cart sites. There is also API integration of Google base. There is an additional functionality wherein Parcel Guru will buy products for the user and the latter can pay for it after some time. This facility will be available for regular customers. Users can maintain order history and transaction history. The site is w3c validated and SSL secure.

There is a feature for shipping rates, which is managed from the admin section. It displays different shipping rates after selecting countries and viewing the rates. There is a functionality of email notification for every transaction to be sent to the admin and users both.

## 2. Miss world:

URL: <http://www.missworld.com>

**Keywords:** Joomla, open source CMS, PHP, MySQL, sh404SEF, SEF component, Template integration, JoomFish, W3C standard, javascript, CSS driven.

**Package:** Joomla 1.5.14

### Description:

The official site for Miss World contest, it has worldwide information of contests to be held. It's a scalable site showcasing life-size pictures of contestants and the pageant along with related information. What makes this site really efficient is that the management of content is easy from the backend since the site is built around Joomla 1.5 open source CMS with PHP 5.2 and MySQL 5.0 technologies and Javascript. Template designing was done with table and div combined and following W3C standard. It is browser compatible with IE 7 & above, FF 3 & above, Safari 4 & above, Google Chrome.

### Key Features:

1. The site features the forthcoming year's venue and the pageant apart from the previous year's news and photos of Miss World contest.
2. The detailed profiles and perspectives of the contestants posted on the site make the user really informed about the event.
3. Apart from news and events, users can also post comments about the contestants or the events. There's every information related to the Miss World contest.
4. We have developed slideshow module using JS. It's controllable from admin panel.
5. We have integrated sh404SEF component for SEF url and also developed custom plug-in.
6. Have integrated JoomFish component for multilingual feature. The site is developed on these languages: English, Spanish and Chinese.
7. Have developed carousel for thumbnail rotation in footer section.
8. We have applied watermarking on upload to manage copyright.
9. We have integrated Zoom-Slide plug-in for zoom-in and zoom-out effect on article images.
10. Have developed component to manage contestants' detail from admin panel. This component allows the admin to add interview Question and Answer.
11. Template integration.

### 3. Sanjosemed

URL: <https://www.sanjosemed.com>

**Keywords:** Joomla, Open source CMS, Bookmark, Java Script, CSS, payment gateway

#### Description:

San Jose Medical Group's Urgent Care center offers medical services without an appointment, when physician is not available. We have built this site on Joomla 1.5 open source CMS package. We have implemented template integration. The site is a users' delight. We have integrated home page DIV background image slide show module using simple JS, DIV background header image changer module. It is controllable by the admin section. Components have been customized to add physicians' profiles. A physician can add/edit his article on the site while admin sections manage the publication of articles. We have done customization so that Contact Us module shows between Contacts Us article sections and newsletter module shows between Newsletter article sections. We have also created font-size changing feature for the site content. We have integrated components for searching physician profiles according to the category, language, keyword and gender type i.e we have created components for searching site content. We have integrated the Cyber Source payment gateway (authorize.net) on the site.

We have integrated Share and Bookmark (add this) functionalities apart from PDF and print functionality. We have also made components to show physician's profile. We have used Cufon to show articles & component heading (Cufon converts the text into image).

## 4. Koolpig

URL: <http://www.koolpig.com>

**Technology:** PHP, Mysql, Joomla open source CMS, Joomsocial

### **Description:**

Koolpig is a social networking site developed for kids. The site is build around joomla , and for community features we have used joomsocial. On koolpig user can login with his facebook account. We have worked on template integration. We have created component for question and answer where user can ask and answer the questions. User can share essay and articles. We have created point system for every activity. For every activity of user he will have some points which will be save in his piggy bank. User can give ratings to articles and essays. Site provides the facility to upload videos and images. After creating profile user can add friends, chat with them, and invite his other friends, browse groups, photos, events. User can send and receive messages. User can show his twitter update as well on profile. User can create his own blog after joining the group become a part of discussion.

## 5. OOCRM

URL: <http://www.oocrm.com>

**Frame work:** Joomla 1.5

**Duration:** 45 days

### **Description:**

Oocrm is a Customer Relationship Management website. It has been built around Joomla 1.5 open source CMS with PHP language and MySQL database. We have worked on template integration and customization. The site is a user's delight. We have created SEO-friendly URLs by using SH404 Component. The admin can manage content, sections and menu category.

There is a home page slide show and flash pages to display video files on the site. We have customized Virtuemart for products. We have also done forum integration in phpBB, created latest news display module on the right side and SEO-friendly tab component that enables the admin to change URLs.

## 6. Hawk-ism

URL: [www.Hawk-ism.com](http://www.Hawk-ism.com)

**Keywords:** Joomla, PHP, MySQL, database, template integration,

### **Description:**

The site has been created as an introduction to Hawk-ism services. The website has an enriched user experience. It is built around Joomla 1.5 and SH404 for SEO URLs with PHP 5.2 language and My SQL 5.0 database. We have worked on template integration so that it displays a different lay out for each section of article. It has a secured registration process (email using public domain will not register). There's enough content security so that only an authorized user can see the content of the site. We have created right-side menu navigation and breadcrumb according to categories. There are SEF SEO-friendly URLs and slide-show modules.

There is a user sign-up so that a user himself can register and log in. There is a text scrolling facility through JQuery to enable management of more content in a single page. Also, there's zoom slide for zooming effect on image and managing content and article as per requirement. We have disabled mouse selection so that any viewer cannot copy the content of the site.

## 7. Vacation rentals club

URL: <http://www.vacationrentalsclub.com>

**Keywords:** Joomla, Mapping API, Payment Gateway, Rental scripts, SEO, Template integration, Web designing. Google map API integration, AJAX, Jquery, Money Bookers, Paypal, Plimus, Web 2.0 application development, hp\_availability calendar, Open source Joomla CMS, youtube API integration, PHP 5.2, My SQL 5.0, customized Google ads, captcha code, rental script, real estate site.

### Technology:

**Language:** PHP 5.2      **Database:** MySQL 5.0

**Package:** Joomla 1.5.14

**Payment Gateway:** Money bookers, Paypal, Plimus

**API integration:** Google Map API

### Description:

The site facilitates the users to search for vacation rental properties at desired destinations. The property owners can post the availability and local details and the users can search and select their locations on the basis of available choices.

The Website has an enriched user experience. A pretty face to articulate functionality and web-safe colors for disabilities. It is a multilingual vacation portal with social network features built around the hot property component of Joomla 1.5 and SH404 for SEO urls with PHP 5.2 language and My SQL 5.0 database. The Payment Gateways are Money Bookers, Paypal and Plimus. Ajax and Web 2.0 were used where ever possible for enriched user experience. The site is designed to mitigate risks and restrict users by retrying their malicious deeds. It is Browser compatible with IE 7 and above, Firefox 3 and above, Google Chrome, Safari. Exhaustive listing corresponding to property makes the site more useful and user friendly.

There is Google map – API integrated and customized – to display multiple properties based on search results. We have developed custom component for this. We have integrated database to add and populate properties on site apart from developing custom modules for holiday by seasons, theme, popular destination and other features. It has customized Joomla search to search properties and, placed and customized Google ads. Advertisers will have their separate control panel where they can login and upload the property listings to the site. Advertisers can

upload various listings with extra text, multiple rental units, special offers, direct address, amenities, photographs, calendar availability and other services. For calendar we have used component hp\_availability calendar. Advertiser can receive direct inquiries from the customer on the listings.

Advertiser can have facilities for property brochure; can post local events, and have list of nearby attractions and shops, SMS inquiries, free calendar, payment gateway, post and read reviews, autopost to classified sites, vacation rentals directory, and SMS.

We have developed custom component and module for user registration and login so that a user can plan the vacation and search for the rentals as per the country and locations. The user can make use of the offers posted by the advertiser and schedule the holidays and book the rentals. The user is able to check the availability of the hotel or villa, rooms and interior and charges, nearby places and other services provided by the listing owner.

Community portal workflow: The user can create network with the help of community features available on the site. Users can upload stories, photos, browse interactive map, and participate in forums and blogs. There is youtube API integration for the user to upload videos.

The mobile version of the site makes it extremely handy. Get Leads by Mobile and Palm have been developed using PHP.

#### **Key Features:**

1. The site is for the property owners as well as the users.
2. The owner can post rental property on the site and list various such properties on the availability calendar.
3. The users, on the other hand, can book rental property online.
4. The visibility of the property on Google Maps makes the site all the more useful.
5. There is a community section and Fireboard Forum to add to the utility of the site.
6. Captcha for Joomla 1.5 have been developed.
7. Forms and attributes have been added.

## 8. Mr. World

URL: <http://www.mrworld.tv>

### Description:

The official site for Mr. World contests, it has worldwide information of contests to be held internationally. There are useful features like year-wise news related to Miss World contests, slide show of pictures with an auto interval and a photo gallery. What makes this site really efficient is that the management of content is easy from the backend since the site is built around Joomla, CMS.

## 9. Las Vegas Relocation

URL: <http://lasvegasrelocation.com/>

### Description:

Las Vegas Relocation is a real estate website built around Joomla open source CMS. We have fixed its form and updated the Joomla version.

## 10. AGFCU.ORG

URL: <http://www.agfcu.org/>

**Keywords:** Open source Joomla CMS, Joomla customization, Classified ads, calendar, Joomla development

**Description:** The site is built around Joomla open source CMS. The site has a registration page, static pages, events page and calendar. In calendar, a user can add, edit and delete events. The user can sort events by date, week, month and year. The user can also search events on the basis of date and keywords. He/she can manage classified ads and announcements and also search them via date and keywords. There is also a customization for newsletters and articles. The site has forms and static pages also. The admin is able to manage content, images, calendar and other functionalities.

## 11. JOKR Solutions

URL: <http://bp.jokrsolutions.se>

**Technology:** php, mysql, Joomla

**Keywords:** Joomla, Template integration, Web designing. Open source Joomla CMS, PHP 5.2, My SQL 5.0.

### Description:

The website is to create and publish classified ads for death notifications. The site is having a customized component for creating classified ads. First user can choose purpose of ads then he can choose template format. User can customize template using JS editor. User can select image, gallery, and title, date of birth & death, write description and publisher name in the ad post. User can select quotation from list provided. Here user can search with advanced options and can check my image for his uploaded images. There is the page advertisement which show ads complete with payments user can see all the details on it. User can copy embedded code of ad for further use. The site is in multiple languages.

## 12. Unlock The Gate

URL: <http://unlockthegate.ae>

**Keywords:** open source CMS, Joomla customization, Joomla development, Cufon

### **Description:**

The site is for promotion of hotel and showcasing lucky prize winners. It is a static site built around Joomla open source CMS. Cufon is used to modify text into image form for content. There is registration feature available on the website. There is a functionality available at the admin for importing and exporting users. Users can view lucky draw winners. The admin can change the background of the site pages.

### 13. Citizen Center

URL: <http://citizencenter.anylinuxwork.net/>

**Keywords:** Joomla open source CMS, Joomsocial, Joomla customization, Joomla development, JomSocial extension, Fpmember widget

#### Description:

CitizenCenter.com is a social website to help Citizens and Politicians to build better relationships. The site is built around Joomla (open source product – version 1.5) along with JomSocial extension. The site has simple interface, clear visual heading and consistent style across all pages. The home page of the website consists of registration, login, list of politicians, political centers, community centers, party centers, groups etc. A user can register on the website directly or with Facebook or Twitter. Only those politicians who have identified themselves as a Politician will be in the list. After logging into the account, the user can find member action center. Here the user can find messaging system; view his friends and invite his email friends; start a group and display group; upload and view photos, videos; create events and write blogs. The user can verify himself as a politician.

In My Profile section, there are features like wall, user profile, my status, biography and friends. On the group dashboard, the user can place group title, description, avatar, categories, add articles, blogs, videos, photos and like and dislike them. The user can also include his social media connections like Facebook, Twitter, Youtube, Wikipedia, Flickr and any other links based on URL. There is an Fpmember widget used for configuration of displaying a specific type of user. In Groups section, there are some advanced customized features like any member can become a follower or supporter of any group or a group can be associated with one or more groups. Each associated group can have a relationship label assigned and can show member relationships. Each group can have one or more moderators and these moderators are assigned by Group Creator or Administrator. Each user will be able to create certain category of groups based on the permission of administrator. For generating funds out of group, the group admin can enable 'Fundraising'. Then group will show a Logo "Donate" on Group viewer page after which featured groups will be displayed. Twitter details will integrated within the Group Viewer. There are also some general enhancements like Google ads integration, Google analytics integration, and full site SSL layer support.

## 14. Yohjo Market place

URL: <http://www.yohjo.com>

**Keywords:** Affiliate, Ecommerce – Shopping cart, Joomla, Payment Gateway, SEO, Template integration, Under Construction, Web designing, Integrate Amazon stores, open source CMS, Escrow payment service, Paypal, flash, Art work.

**Technology:**   **Language:** PHP 5.2    **Database:** MySQL 5.0

**Package:** Joomla 1.5.14

**Payment Gateway:** Escrow services

### **Description:**

The site under development is meant as an online platform for art lovers to buy/sell art and craft design products. The site is built around Joomla 1.5 with Virtuemart customization and good-quality flash presentation with PHP 5.2 language and My SQL 5.0 database. The site is Browser compatible with IE 7 and above, Firefox 3 and above, Google Chrome, Safari.

We have done template integration with flash slide show on home page with snaps of the art work being changed constantly and flash integration. Artist, Buyer or Wholesaler buyer can register and login.

Artists can use Yohjo to upload, share and sell arts and crafts online. After registration, they will be able to use the site to display and sell their artwork. There is a range of software resources contained on the site to assist artist with the set-up and management of online galleries. Artists can create their art gallery and set the prices of their artwork. After selling the artwork, artists can send withdrawal request to admin for releasing Escrow.

Artist can upload pictures, select categories, insert his biography, manage his artwork and news, and upload document. Artist can buy voucher, manage his art gallery, contact buyer and send private messages. Escrow service is provided for payment deposit.

There is a customer buyer account setting where wholesaler and buyer can fill their details. They also can check the status of their orders and sales. Buyer can post rating and reviews for the artwork. There is a voucher coupon available for buyer so that he can gift anyone for purchasing items from Yohjo.

E-Commerce Set-up and Virtuemart functionality are provided for both buyer and seller. Virtuemart is used for the shopping cart functionality. There will be functionality for Multiple Currencies (one can allow Customers to change the Currency and buy using an alternative Currency).

Basically it is a B2C network with Escrow payment system. The Escrow service allows the user to have an agreement (for money) delivered to a third party or put in trust by one party to a contract to be returned after fulfillment. The best part of this payment system is that buyer's money doesn't get debited until he sees the product and approves it. There will be a Payment gateway configuration via Paypal. The integration of the Amazon stores in the site is managed by the admin. The design of the store has to be kept similar to the site's look and feel.

**Art sellers have the facilities below:**

1. Artist can sell and purchase artwork.
2. Artist can send withdrawal and deposit Escrow request to the admin.
3. Messaging system is available between buyer and seller.
4. Artist can manage product and change pricing.
5. He can create galleries for artworks.
6. Artists have been allotted memory space for uploading related stuff depending upon the membership plan.
7. Artist can upload images, videos and documents related to his artwork.
8. Artist can upload and manage NEWS related to his work.
9. There's an option for showing history for selling and purchasing.
10. Artist can write about his own description and choose category related to his work.

**Key Features:**

1. There are separate sections of arts and crafts with picture galleries of artworks of various artists keen on selling their products. The Share section provides a platform for the artists to share their artworks and also quote a price for the same.
2. The sellers can add products, photos of products, categories etc.
3. The artists' biographies add to the credibility of each art piece and also increases chances of its selling.
4. The buyer, on the other hand, is assured of the credibility of the artwork because of transparency on the site.
5. There is an added feature of Gift Voucher System.
6. In addition, there is a Yohjo bookstore, which has an array of books, related to art and craft.

## 15. Inc Sure

URL: <http://incsure.co.uk/>

### Description:

This is a Joomla-based insurance site which enables a user to protect his income in an event of a mishap i.e. accident, sickness or redundancy. Customer can apply for any of the insurance plan by entering his details. Related search feature helps a customer to select an insurance plan easily.

### Key Feature:

- User can get a quote for a particular insurance plan desired by him through Request a Quote option.
- User can also make a claim by contacting the claims administrator who assists customer.
- Another feature of the site is Income Protection under which insurance is paid directly to the policyholder allowing them to decide on what the money is spent.

## 16. Hotel booking & reservation

URL: <http://www.reservethaihotels.com/>

### Description:

The site enables hotel booking and reservations. We have mainly done a lot of re-working for this site like fixing glitches regarding Joomla component error and browser running issues. Basically the site is about Joomla CMS where admin can manage the contents from the backend and can update the schedule and listing charts.

### Key Feature:

- Users get a big database of as many as 1000 hotels whose details have been posted on the site.
- The blog feature on the site makes it all the more informative and interactive.
- Users can search through a quick and easy search box found on each page, or browse through the available hotels in each city.
- The Help section takes care of booking, cancellation, trip planning etc.

## 17. Claremont Motors

URL: [www.claremontmotors.co.uk](http://www.claremontmotors.co.uk)

**Keyword:** Joomla, PHP, MySQL, Google map API

This is a complete Joomla-based solution for motor servicing and repair. Users can come and search for a service / repair and can book vehicles online. We have integrated flash on home page. There is a content tab display on home page. Also there is a booking feature on moot functionality integrated so that user can do car booking from another site. We have integrated car-booking component and user will get an email notification when the booking is done. We have developed tab component for product details page. We have also integrated SEF component for URL renaming.

### Key Features:

- A user can book for services like free collection and delivery of vehicle, free wash and vacuum and pricing / delivery schedule through sending a quote.
- At the time of booking, users can enter the details of vehicle and can select a branch where they need to repair their vehicle.
- “Call me back” is a unique feature on the site where a customer can enter his name and contact number. The details are forwarded to the customer care representative for the selected branch from where the executive calls a customer.
- Google map API feature helps a customer to locate a repair center nearest to a bus or railway station.

## 18. Impres Medical

URL: <http://www.impresmed.com>

### Description:

It's a site for catering to women health care and treatment. It's a Content Management System (CMS), Joomla-based site. Admin can manage the data from the back-end and can update it frequently.

### Key Feature:

- There is a product line of the clients on the site.
- Investor's information is integrated on the site where the investors can log in.
- Investors are registered by the admin. There are two types of articles available on the site- public and private. While all users can view the public articles, only the investors can access the private articles.

## 19. Kohler

URL: <http://playpen.visionstream.com/~kohler/>

### Description:

The site is build around Joomla which provides a professional engineering and design services across medical, electrical, plumbing and fire protection. Basically the site offers safe, reliable and energy-efficient designs that are technologically sophisticated yet cost effective and easy to maintain. The firm has completed projects related to design and engineering of museums, universities, library, education and houses.

## 20. Sansfil

URL: <http://www.sansfil.fr/>

### Description:

This is a site in French language that talks about wireless ISP services in Quebec named Digicom Internet Sansfil. The site seeks to provide a major support for these services. It has B2B, B2C support packages for users. It is built around Joomla CMS.

### Key Feature:

- There is a flash menu integrated on the site, which is totally customizable.
- The site is easy to manage from the administrator's end.

## OSCOMMERCE

### 21. Tots Swap Shop

URL: <http://totsswapshop.com/>

**Keywords:** osCommerce, PHP, MySQL database, Dojo toolkit, AJAX, tableless template integration, CSS driven, FedEx, web 2.0 development, Authorize.net, shipping module, ecommerce, Paypal, USPS, UPS, FEDEX, DHL, Google Adsense advertisements, credit card.

#### **Description:**

Totsswapshop is built around osCommerce v2.2 RC1 with PHP 5.2 language, MySQL 5.0 database and Dojo toolkit for AJAX web 2 Java. The template designing of this site is tableless and CSS driven. The website is compatible with IE 8, IE 7, Firefox 3 and above browsers. The payment gateway we have integrated is Authorize.net and we have used FedEx for shipping module. The portal has multiple layers of security as the portal contains crucial personal information.

This ecommerce site is based on a unique points system. The users get to swap products for the points they are rewarded. The site sells kids merchandize on the basis of points gained each time the user creates a page for an item.

It's an online shopping cart which will allow the users to exchange or swap the children's 'used' goods or new goods. The buying and selling of goods will take place with the help of a specially devised 'point-based' system. The system maintains the point and currency relationship. The revenue is to be generated from the selling of goods as a percentage of each transaction, direct selling of points to users and advertisements.

There are primarily two types of users of the portal namely general public user and the admin user. The users can register themselves for free on the site to avail the facility of swapping of goods. Every user will be provided some points to spend. The registered users can perform two main activities i.e. buying and selling of goods. So there are two dedicated sections for each of these activities, selling area and buying area.

User can search products with various criteria like categories, age, location, point, conditions and he or she can buy the goods with points + shipping cost. We have integrated Google Adsense advertisements on Side Bar. To enable users to make payments, the portal is integrated with Paypal.

After registration user can view or edit profile and can manage points. The value of the item is determined by the 'points' and not by the currency, and maintaining of the current points status for every user is required. The user can create a wish list – it can be for existing items or not currently on offer. When a seller uploads an item that matches with this item, the buyer is notified immediately.

There is a shipping calculator that is an integration of the portal with the shipping system. We have integrated different shipping methods like USPS, UPS, FEDEX, DHL (domestic only) to calculate approximate cost of an item. We have also integrated FEDEX label to create shipping labels so that product owner can ship products to the buyer. There are options to select buyer pays, seller pays, buyer picks up, and seller picks up.

#### **Key Features:**

1. We have customized osCommerce so that customers can upload their own products on site for sale.
2. We have created point management system on the site so that product owner can set products price in terms of points. Buyer will have to purchase points on the site to buy any product.
3. Have created Refer a friend module so that whenever user refers any body and if the referred person joins the site, the referrer will get some points as per admin settings.
4. We have created wishlist module so that customers can manage their own wishlist and share it with their friends. We have also created watch list, user can add products which they like and when those products are available on site, the buyer will be notified.
5. Have created manage profile module for users so that sellers can upload their logo and can write some thing about themselves.
6. Have created rating function for users so that users can rate each other for services.
7. Have created Age, Location-based product search module.
8. We have installed FedEx shipping module to create shipping labels so that product owner can ship products to the buyer.
9. Have created a module so that user can purchase points by paying admin through credit card.
10. Have provided options so that buyer can send a message to the product owner. Created SEO URLs on the site and removed osCID from the URLs. To increase SEO ranking.

## 22. Inked Studio

URL: <http://www.inkedstudios.com/>

### Description:

Inked studio is an avenue created for artists and designers to enter fashion industry. It's an interface with online T-shirt building tool that allows emerging designers worldwide to showcase their work and to make profit from their designs. It is built on osCommerce.

### Key Feature:

- The site has a feature of an interactive interface that enables user to actually design the apparels. The studio offers the entire service production facility to the designers and lets them see their ideas getting converted into reality.
- Flash has been integrated and customized while the above feature also allows the designers to play with colors, imagination and creativity.

## 23. Virtual Shopping Mall

URL: <http://www.m811.com>

**Category:** E-Commerce, Shopping Cart

### Description:

As the name suggests, Virtual Shopping Mall is an online shopping cart with Flash and osCommerce integration. This is a virtual shopping zone where shops can be customized while the users get the feeling of shopping from the various floors and shops in a mall. This flash site showcases the physical design of the mall with different categories of products/shops on each floor. The users can simply click and go to any floor or shop that they want and start shopping from there.

### Key Features:

- Landlords can **create floor** in the management panel. Through their log-in, they may add or delete a floor.
- There is a **notice box** located on each floor for advertisement or information. Landlords can edit the notice box content with text, graphic or animation.
- Landlords can create **tenant account** in the management panel. They may also view and edit tenant and shopper information as well as transaction information.
- There is an **information counter to get shops directory** (name and location, shop number). One can search through any product keyword to find out if it is available from a list of shops.
- Tenants/shop owners can **take on rent or buy a shop** on the site. They can build shop through their account using log-in ID, upload shop logo and put in shop name in the management panel. They have options of selecting shop template for shop layout, uploading products' pictures and description, amending uploaded products and having a vending machine for virtual currency.
- Shoppers have to be registered members to buy goods. There is a **shopper log-in** available for shoppers who can register a member account in a web form. Through their account, shoppers can buy token through credit card or can add token value through pre-pay card.

- Shoppers have the **option of paying by credit card or they may pay on delivery**. In case of payment on delivery, the tenant can input instruction in the Tenant Account profile/pay on delivery text. Another option open to the shopper is to pay through **vending machine**.
- Shoppers can **view all the information** about money transaction through weekly, monthly and yearly reports in the profile.

## 24. Karma-Deco

URL: <http://www.karma-deco.com/>

### Description:

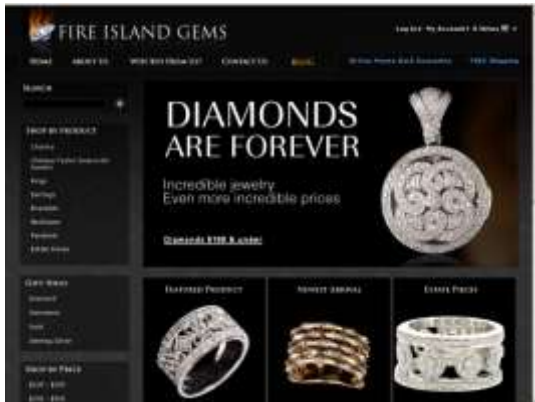

The site is an osCommerce-based shopping cart, which is in English and Spanish. The site has a flash presentation showcasing various products being sold at the site. It enables the buying and selling of home decoration products and accessories. The site is integrated with PayPal while other payment options through different credit cards are also available. The admin can upload pictures of a wide range of products.

### Key Feature:

- The menus on the site have heavy customization.
- Users can purchase with or without having an account on the site. Though having an account enables the users to constantly keep a track of the orders, they can re-order products as per their needs. Since there are other related products also listed with the site products, Karma-Deco also makes cross-promotion quite convenient.

## 25. Fire Island Gems

URL: <http://www.fireislandgems.com>

## ZEND FRAMEWORK

### 53. Mixels:

URL: <http://www.mixels.com>

**Keywords:** CMS, Web designing, Zend Framework, Zend PHP framework 1.6, MVC architecture, Ejabber, Open source CMS, instant messaging server, Jabber, XMPP, child monitoring systems, JQuery, schedule manager, dhtmlxScheduler v.2.0, Paypal, payment gateway, CSS driven, tableless template integration, AJAX, JQuery, animation, live chat.

**Language:** PHP 5.2      **Database:** MySQL 5.0

**Framework:** Zend framework 1.6, Zend PDF, Zend cache, Zend DB, Zend layout, Router, JQuery 1.4

**Third Party/Web services:** Ejabber chat 2.1

**Payment Gateway:** Paypal recurring payment

#### **Description:**

Mixels is a social networking site for kids and lets parents keep a track of their child's activities. While the site's animation, live chat etc add to the fun factor for kids, its advanced safety tools are what most watchful parents would want.

It has been built around Zend PHP framework 1.6, Ajax and JQuery. Zend framework follows MVC architecture for rapid web application development, Integrated and customized with Ejabber chat 2.1 – a Jabber/XMPP instant messaging server that provides online chat for kids. JQuery enables the user to create dynamic avatars. User can change body type, color, face features and clothes of his/her avatar.

The site could well be called as one of the landmarks towards child monitoring systems. This social networking site has several features to help parents keep a track of their children's online activities like they can set their child's chat hours, download chat logs, and approve friend requests and so on. While its interesting animation has a great appeal for the children, the facilities keep parents at ease during their children's online hours.

There is an internal email messaging service where user can find Mixels mails, news, list of friends, photos, online diary, text messages, individual chat tab and group chat tab. For online diary it has also Integrated JQuery schedule manager and "dhtmlxScheduler v.2.0" calendar that provides a simple and flexible way of including a weekly

calendar. It covers drag and drop features, month/day/week view, selecting different color, booking system and reminder.

Ensuring online security and safety of child is the most important thing the site does. Credit card verification and billing information allow the site admin to ensure that everyone using Mixels is who they say they are. Here we have integrated Paypal recurring payment using credit card.

The template designing of this site is CSS driven and tableless and website is compatible with IE 7 and above, Firefox 3 and above, Google Chrome, Safari browsers.

The site is developed on Zend Framework, Integrated and customized Ejabber chat software, Dynamic Avatar creation using JQuery, Developed JQuery chat and group chat boxes; it can Block unsuitable content for kids; has Online chat log to enable parental overview, Integrated JQuery schedule manager for online diary, Paypal recurring payment using credit card and Developed internal messaging system for both users.

It includes features like friend search, chat, share photo, Parent console to monitor kid's activities.

The facilities admin parent / guardian will get:

1. Chat scheduling
2. Edit account
3. Edit contact info
4. Download chat logs in PDF format
5. Mixel monitor
6. Messages (inbox, sent and saved folder)
7. Mixel user's friend list
8. List of restricted words used by Mixel user
9. Mixel user's profile
10. Option to monitor another Mixel account
11. Payment history (it will list paid and due payments)
12. Chat with other parents

### **Key Features:**

1. Mixels has state-of-the-art security features to keep children safe from the online predators. The built-in filtering technology automatically blocks any inappropriate content from appearing on a child's inbox or chat screen.
2. Joining Mixels is quick and easy: the child and his parent or guardian can create an account by entering a username, password and email address.
3. Once the parent has verified receipt of the confirmation email, the child is free to send friend requests, chat live with other members, and explore all that Mixels has to offer.

## 54. My Resume Book

URL: <http://www.myresumebook.com>

**Keywords:** Zend framework, LAMP, AJAX, JavaScript, Cross browser compatible, MVC architecture, PHP 5.2, MySQL 5.0, Job portal

**Language:** PHP 5.2 Database: MySQL 5.0

**Framework:** Zend framework 1.6,

### **Description:**

Myresumebook.com is basically a job portal where job seekers can register and upload their CVs. On this website, employers/recruiters can also create their profiles and post their jobs for recruitment.

The website has rich text editor created with AJAX and JavaScript through which job seekers can create their resumes. The resume editor has drag and drop features. Users also have a feature to upload videos and slideshows for their profiles. For creating their CVs, users can fill the details manually or they can import their personal details from their LinkedIn accounts. For this, users are required to provide their LinkedIn login credentials. The website has registration system with Captcha and account activation mail features. The website has three levels of users, namely: Job candidates; Employers and recruiters; and Students and alumni. Users can set privacy settings for their accounts so that only permitted users can view their profiles. The website also has calendar through which users can manage their appointment schedule for jobs. The calendar has drag and drop features; month/day/week wise view with options of changing different colors; booking system and reminders.

### **Key Features:**

1. Captcha authentication – On MyResumeBook, the registration system has been integrated with Captcha authentication. Users are also required to activate their account by responding to the activation mail.
2. Multiple levels of users – The website has multiple levels of users which are Job candidates; Employers and recruiters; and Students and alumni.
3. Import LinkedIn profile – Users can import their LinkedIn profile details for creating a CV on the website. Users are required to provide their LinkedIn login credentials to import the details.

4. AJAX & JavaScript to create/edit CV – Job candidates can create their resume with AJAX/JavaScript editor. The editor also has drag and drop features.
5. Image/audio/video content – Users can add Image/slideshow/audio/video content in their profile. Users have an option to either add media file directly from their desktop or add Yahoo video or YouTube shared video. Users can also upload a slideshow.
6. Directory –The website has directory structure for Professionals, Employers/Companies and Jobs. There is also a search facility integrated into the directory.
7. There are marketplace features for advertisers.
8. Blog – Wordpress integration has been done on the site for blog functionality.
9. Share – The user can share his CV through emails, social network (Twitter, LinkedIn, Facebook) as well as within MyResumeBook itself in order to promote himself.
10. Promotion: The user can promote himself by using the “My CV” button, which is generated by the system. An HTML code for the same is thus generated which can be placed in email signature, on blog pages, or anywhere else for the purpose of promotion.
11. Privacy control – On this website, the user can set privacy control so that only specified people can view his profile and CV.
12. RSS Feeds – The website also has a feature for RSS feeds.
13. CV views – There is a functionality on the website through which the user can view the names of people who have viewed his resume. He can view visitors’ list based on the time when his profile was visited and on the type of users.
14. Tell a friend – Users can forward/ recommend a job to their friends. For this, users can import their address book from Gmail, Yahoo, Outlook, AOL etc. Users can also send an invitation from Facebook.
15. Ad-free site – Myresume book is free from any kinds of Ads.
16. There is a feature for uploading video CV too. Users can add Yahoo or Youtube videos.

## 55. Mega Website Builder

URL: <http://www.megawebsitebuilder.com>

**Keywords:** Affiliate, Ecommerce – Shopping cart, Payment Gateway, Shopping cart, Web designing, Wordpress, Zend Framework. EBay, Amazon, commission junction, Linkshare, Clickbank, UPS shipping, USPS shipping, Fed-Ex Shipping, Cheque/Telegraphic Transfer, Cash on delivery, Paypal/Credit card, Authorize.net credit card SIM, 2Checkout, iPayment, maybankard SENTRY, china payment IPS, Paypal recurring subscription, RSS feed.

**Language:** PHP 5.2

**Database:** MySQL 5.0

**Framework:** Zend framework 1.5, AJAX

**Package:** Wordpress, phpBB

**Third Party/Web services:** Commission junction, Linkshare, Amazon, Clickhard, Sharesale, Clixgalore

**Payment Gateway:** Paypal. Malaysia bank, Hong Kong, Authorize.net

### Description:

The site is built from the scratch around Zend framework where user can purchase packages for website creation. Here different plans are available for multiple packages. The site is incorporated with affiliate programs and feedback/rating features for the users in order to rate the working results of packages.

Mega Website Builder is an advanced and search engine-friendly site builder with the latest technology to help you build your professional website faster and has features with Web 2.0 elements. Payment gateways are Cheque/Telegraphic Transfer, Cash on delivery, Paypal/Credit card, Authorize.net credit card SIM, 2Checkout, iPayment, Maybankard SENTRY, china payment IPS, Paypal recurring subscription.

## 56. Best Home Health care:-

URL: <http://www.besthomehealthcare.com>

**Keywords:** Zend framework 1.5, AJAX, Zend view, Zend Cache, Zend router, Zend layout, JQuery

**Platform:** PHP 5.2, MySQL 5.0,

### Description:

This is a website for senior citizens and other people who require various health care services at their homes. This website is a platform where clients and service providers can interact with each other and view each other's profile and other details. On this website, a client can set access privileges for different kind of users. Other users would be able to view a client's medical history and other details only when the client has provided them the access to such privileges. When given access, service providers can view medical history and other details of the client like previous prescriptions, calendar of medicines (Google calendar integrated), daily schedule of patients and so on.

The website also has a unique feature by which clients can conduct a background check of the service providers. The service providers can get themselves authenticated by providing their SSN (social security number). A service provider has to pay one-time fee for getting the background check done. The background check verifies the service provider as trustworthy. We have integrated Axicom API to check the service provider's background with the help of SSN. After service provider has been authenticated, clients can check his background.

There is a search criterion in which user can search on the basis of various criteria like zip code and miles around the area. There is a shopping cart available by which user can purchase uploaded and locally listed products. We have integrated blog feature in it. There is a medical calendar in family login section.

**Project Details** – The following are the features of the Best Home Health Care website.

1. Registration system – The registration process is similar to the myspace.com website with captcha. After submitting the registration form, the user is required to activate his account from the link in the activation mail.
2. Profile Statistics – This includes number of profile views, contact detail views.
3. Messaging System – This enables clients and service providers to communicate with each other.
4. Axicom API integration has been done for background check on service providers with the help of SSN (social security number).
5. Paypal payment gateway integration has been done for online affiliates whose products have been posted on the site.
6. Google Maps – Through this integration, service providers have an option to mark their location on Google Maps.
7. Upgradation Packages – The website has various account upgrade packages for service providers.

8. Search functionality – Clients can search for service providers as per zip code and number of miles.
9. Multiple level of users – Apart from client and service providers, this website has three other kinds of users i.e. investor admin, care log user, advertisers.
10. Different access settings to 5 types of users on site: Service Provider, Seeker, Investor, Advertiser, Admin. In addition, there is a Family care login.
11. Cross browser compatible – Cross browser compatibility support for IE 8, IE 7. Firefox 3 and above.
12. SEO friendly urls.
13. Wordpress integration– Wordpress has been integrated on the website for blogs.
14. DHTML calendar integration – This calendar has been integrated on the website so that service providers can mark their availability on the calendar.
15. SSL integration has been done on the website for encrypted data transfer.
16. RSS feed– Users can subscribe to RSS feeds for blogs.
17. Google Affiliate System has been integrated on the website for the affiliate system.
18. Google ads integration.
19. Google analytics integration has been integrated on the website to monitor website traffic.
20. Video upload feature – Service providers can upload videos for their profile.
21. Referrals system – On every referral, user gets \$10 in his/her account.
22. Newsletters subscription.
23. Ratings system – Users have an option to provide ratings to service providers.

There are four types of users on BestHomeHealthCare.com:

1. Seeker Individual
2. Seeker Agency
3. Provider Individual
4. Provider Agency

Seeker Individual user/ agency will have facilities like:

1. Personal profile details, photo and membership information.
2. Message inbox and message sending facility.
3. Their status, statistics and list of favorites.
4. Refer a friend for seeker or provider via email.
5. Post an eCare request for home care remodeler or housekeeper.
6. Participate in Caringcredits fundraiser and support non-profits.
7. Submit articles and videos, review and ratings.
8. Agencies can add social workers and advocates.

Provider Individual user/ agency will have facilities like:

1. Personal profile details, photo and membership information.
2. Message inbox and message sending facility.

3. Their status, statistics and list of favorites.
4. Refer a friend for seeker or provider via email.
5. Provider can upload his references.
6. Provider can upload his job application and his availability.
7. There is a health care marketing toolbox to assist provider sales and marketing.
8. Participate in Caringcredits fundraiser and support non-profits.
9. Submit articles and videos, review and ratings.
10. Subscription and billing information.

My Care and Family Care feature common for both provider and seeker:

1. Calendar and To Do List to keep track of appointment.
2. Store medication listing.
3. Contact information for friends and families.
4. Provide medical health history.
5. Insurance information.
6. Grant other user access to stay informed.

## 57. Calorie Monster

URL: <http://caloriemonster.com>

**Keywords:** Zend framework, Ajax, Wordpress, JQuery, PHP 1.5, MySQL , zend php framework, MVC architecture.

### Description:

As the name suggests, the site is basically a search engine on all kinds of fitness and nutrition needs. The best part about this social networking site is that it includes all kinds of nutrition facts about various kinds of foods enlisted on the site. There are recipes with nutrition chart showing their ingredients. The site has been developed from the scratch using Zend, Ajax, Wordpress and JQuery with PHP 1.5 and MySQL. Zend framework follows MVC architecture for rapid web application development. It enables photos to be uploaded for profile page; has inspirational photos; and allows sharing of content via social media services. There is an exercise tracker, diet tracker and fitness calculator. The admin can manage food intakes, newsletter, advertisement banners, static site content, and media content.

### Facilities for user:

1. User can write his personal details and upload his photo.
2. User can take a taste-test where he can rate food on the scale of 100.
3. User can search recipes by ingredients and foods, and can also share his recipe.
4. User can submit a recipe, upload images and add friends.
5. He can manage his profile, join blog and post entries.
6. He can invite friends from address book. Site has an import feature too.

### Key Features:

1. USDA database has been integrated on the site for food and nutrition search.
2. The users have an array of food categories to choose – from baby foods, baked foods, seafoods, beverages, vegetable products to sweets, soups and sausages.
3. The users have a facility of daily diary where they can keep a track of calorie intake and calorie consumption.
4. The users can also create their own profile and start networking with other calorie-conscious people.
5. The Search option increases the scope of the site by providing all kinds of foods and calories on display as searched by the user.

## 58. Social Network

URL: <http://www.82link.com>

**Keywords:** phpBB, Social networking, Wordpress, Zend Framework

### Description:

This is a social networking site with B2C, B2B, C2C and S2BC solutions. In addition, the site is eCommerce-compatible where user can pay online for purchased products. The site is incorporated with business guideline from guru selection. It has been created on Zend, PHP and Ajax. This multi-lingual site has all the social networking features like events, blog, groups, polling, music, video, inbox, guest book, photo album etc.

Admin site will have account management, simple user management, word sensors for replacing abusive language and email announcements. Video streaming software has been integrated so that users can add the videos on their profiles. Admin allocates limited disk space to user for the content uploaded. Users can insert their own custom CSS styles to give their albums a more personalized look. Paypal integration will be the payment gateway for the users to transfer the money online. User can earn points by taking part in various activities on the site. For instance, they can refer another person, answer questions, recommend etc and make use of them as per their requirements. Smiley faces are allowed to the user to post in the comment section. RSS feeds are also provided to the users. Users can view other people currently chatting in the chatroom. Admin can choose who or what should appear on the online list or how it should appear – whether a series of user photos or a simple list of usernames.

Members may post their products to sell on their personal pages with both a price (in whatever currency) and the MyLink dollar price.

It has video services too. There is a registration for user with captcha code, smiley, sound, and advanced search. User can customize groups or discussion board. There is a membership for groups of three levels – leaders, officers and members. User can upload music, videos, pictures, files, images. There is a Mail Management system too. User can add friends and create albums. Features like events calendar, polls, logs notification, friend, my log, visitors log etc are also included in it. There is an Efficient AJAX chat system.

There is a Multilanguage feature like for Chinese, Korean, Japanese and other languages. We have integrated video streaming software so that users can add the videos on their profile. Admin can ban users, delete users, manage blogs created by user,

**Key Features:**

1. The site is basically for people interested in online business with China. Thus it enables the user to open his store and start online business.
2. The site is equipped with all the features of Linked-In like professional networking, business profile, recommendations, internet marketing, FAQ section, exploring opportunities and so on.
3. The highlight of the site is the virtual dollars option. Users can earn virtual dollars if they refer the site to a friend.
4. Wordpress blog has been integrated on the site.
5. There are WYSWYG editor, payment gateway, Affiliate program, Immediate indexing also integrated.

## 59. Rent A Property

URL: <http://rentaproperty.anylinuxwork.net>

**Keywords:** Zend Framework, Zend PHP framework 1.6, MVC architecture, rental script, real estate site, PHP 5.2, My SQL 5.0, Web 2.0 application development

**Language:** PHP 5.2      **Database:** MySQL 5.0

**Framework:** Zend framework 1.6

### Description:

It is a multilingual vacation portal with social network features built around the PHP 5.2 language and My SQL 5.0 database. We have developed this site from scratch using Zend framework. Zend framework follows MVC architecture for rapid web application development. It is Browser-compatible with IE 7 and above, Firefox 3 and above, Google Chrome and Safari. An exhaustive listing related to property makes the site more useful and user-friendly.

An advertiser can log in and upload property listings to the site. An advertiser can upload various listings with extra text, multiple rental units, special offers, direct address, amenities, photographs, calendar availability and other services. He can receive direct inquiries from the customer on the listings. A user can plan the vacation and search for the rentals as per the country and locations.

A user can make use of the offers posted by the advertiser; schedule the holidays and book the rentals. The user is also able to check the availability of the hotel or villa, room's interior and its charges, nearby places and other services provided by the listing owner. The user can view the special offers and search properties by various categories.

Community portal workflow: Users can create network with the help of community features available on the site. Users can upload stories, photos; browse interactive map, and participate in forums and blogs.

On property page, there are functionalities like uploading photo, checking availabilities calendar, viewing location on map, viewing rental rates, reviewing properties and viewing accommodation. A general user can join the network and communities. Here too, the user can write stories, mark tags, use messaging, write guest book entries, vote in poll, and get spotlight. Advertiser, on the other hand, can create special offers, place order for special offers and manage listing.

The admin can manage users, property content, community portal, rental contract, SMS gateway integration.

## 60. Create My Home

URL: <http://www.createmyhome.com.au>

**Keywords:** Zend Framework, Zend PHP framework 1.6, MVC architecture, real estate, social networking, rental script

### Description:

Createmyhome.com.au is a site with an objective to create a value-adding online system for the new home construction industry to improve the experience of customers, home builders and architects. On this site, a user can find seekers and providers for builders and architects. The user can search on the basis of the city or the architect's name. The builder can create his profile while the job provider can post his job. Both the parties can message each other. The seeker will find the contact details after paying to the website and then only he can personally meet the provider and discuss the project.

## 61. Green Lane Designs

URL: <http://www.greenlanedesigns.com>

**Keywords:** PHP, MySQL, Ecommerce, Shopping Cart, Ajax, Javascript, Current Converter

### Description:

The site has been built around PHP with Object-Oriented approach, and MySQL (Database). We have created an HTML editor for items and added header/footer for the site, so that anyone can change it. A person good in PHP can modify/add the functionality as well, if required. We have used Javascript, PHP, and AJAX to create "Menu/Title" and "Quick Cart". There is a created module for currency converter by which user can find rates in different currencies. The site Green Land Design has an HTML Editor for adding items' description and information pages. The admin can manage items. There is an option to add attributes like "Size", "Color" etc for the items. The admin can see the details of orders made on the site with shipping option and payment gateway settings. There is a gift-wrapping module where the admin can set the price for gift-wrapping.

Whenever users click the "Buy" button, an item is added on the quick cart immediately. We have used AJAX and inner html for this functionality, as AJAX never refreshes the whole page. Quick Basket contains a record of the transaction. As a result, even if the user has forgotten to save after purchasing, he would be able to access the detail of the transaction next time when he logs in. We have created a temporary table of quick cart for showing the cart in future as well without username/password. The IP address of the computer will be saved in the database temporarily to show the cart content next time as well. In Quick cart, there are two buttons – "View Cart" to go to main cart page for final checkout and "Delete from quick cart". There's a currency converter through "XE.Com" integrated on the site. In the basket, the shipping price will be calculated and added in the grand total. The user can select Extra-Gift Wrapping cost option to get the item gift-wrapped. On the final checkout page, the user has to select the payment method and has to enter the credit card details. We have integrated PROTX VSP as payment gateway. We will use CSS for all the buttons. The whole site will be designed keeping the W3C standards in mind.

## 62. Shopping Mall

URL: <http://www.mall28.com/>

**Keywords:** Affiliate, Ecommerce – Shopping cart, Zend Framework

### Description:

The shopping mall has been created from the scratch using Zend framework which follows MVC architecture. The model decides different compartment of the project, the view shows different presentation schemes based on particular model executed by controller. The website is about online purchasing via selected store. This is a shopping mall application from where user purchases items. If any user wishes to create a store in existing shopping mall, he can upload the products by selecting a membership plan. The store can be let out rent as well. Affiliate programs have also been incorporated within the site. Community features like blogs, chat and forums have also been embedded into the site in order to target a niche audience.

## PHP

### 63. Fit Tracker - Fitness Social networking site

URL: <http://fittracker.shapefit.com>

**Keywords:** PHP 5.2, MySQL 5.0 database, template designing, tableless template integration, CSS driven, phpBB, forum, wordpress, blog, mobile version, fitness, diet, exercise, BMI calculator, CMS, open source CMS, videos.

**Language:** PHP 5.2      **Database:** MySQL 5.0      **Framework:** JavaScript, CMS

**Package:** phpBB, Wordpress

#### **Description:**

Fit tracker is a social networking site meant for fitness enthusiasts. It is equipped with many advanced tools like fitness tracker, diet tracker, and exercise calendar in addition to other online community features so that fitness-oriented online users can get in touch with each other and keep a track of their fitness levels. The members also benefit from diet advices and exercise tips from fitness experts on board.

The fitness tracker is built around PHP 5.2 language and MySQL 5.0 database. Template designing of this site is tableless and CSS driven. The website is compatible with IE 8, IE 7, Firefox 3 and above browsers. We have integrated phpBB forum and wordpress blog. We have also created a mobile version of the site using PHP where user can keep track of workout/diet plans; web database is synchronized with the mobile.

The user may get in touch with people sharing the same or having different fitness criteria. There are features like exercise programs with pictorial representation, videos, diet plan, latest news, nutrition charts, exercise analysis chart, report in graphical format, networking, calendar facility. The site uses BMI calculator for counting daily calories apart from keeping a track of nutrition consumption and workout with analysis graph. The calendar keeps track of daily diet and workout done by the user and displays a comparative graph. It handles a huge database with various techniques that respond graphically on users' data. The site generates detailed graphical reports on calorie fat, carbohydrates and protein intakes. It also displays information about nutritional analysis exercise and metabolism, calorie expenditure, weight loss progress, personal goals, long-term diet, fitness trends and much more! The site also has a "food" feature in which the user can search for food recipes and may even enter a custom-food detailing his/her own recipes. Another special feature of the site is the "exercise" feature. The member can search for an exercise or may even add custom workout. This way he tracks the calories burnt and gets the report of his health. Thus he can monitor time, intensity, distance, and pace for each activity. This also enables him to balance the calories he burns against the calories he takes each day.

#### **Key Features:**

1. Users can search for foods to review their nutritional breakdown and add these foods to their daily diet journal. The calorie chart displays total nutrient intake. Users can create their own custom foods.

## 64. Amsterdam Stay

URL: <http://www.amsterdamstay.com>

**Language:** PHP      **Database:** MYSQL

**Keywords:** Rental script, PHP, MySQL, Moneybooker, Paypal, Google map API

### Description:

Amsterdamstay is a rental site built around core PHP and MySQL database. A user can register as a free member and become an owner. After this process, he can create and publish his property and its pictures in various given categories. The owner can offer various types of discounts and extra rates for his property on certain peak times or some occasions. Guests can review published properties and search available properties between their arrival and departure dates. We have integrated calendar for reviewing schedule. We have also integrated payment gateway so that guests can book properties easily by using Paypal or Moneybooker payment methods. The owner can insert his property in various categories like reservation request, direct booking, affiliated listing, and monthly rentals. In “Reservation Request” property, guests can inquire about available properties for their given dates. In “Direct Booking” property, guests can directly book property if it’s available. In “Affiliated Listing” property, guests will be redirected on affiliated link and then book properties, if they are available. In “Monthly Rentals” property, guests can inquire about booking property for a month. In this property type, guests can pay by Plimus or Dao Pay payment methods. We have integrated Google map API so that the owner can set walk scorer and Google map for his property.

The admin can receive all emails & data of the site and can manage all the features from the admin section as well. There is a Refer to Friend feature to enable the guests to refer property to their friends. Guests can bookmark any page using Add to Bookmark feature of the site and make inquiries for multiple properties in a single attempt using multi-request feature. Guests can forward their queries using Contact Us or “Ask Question” features. Property can be individual or particular.

## 65. TheParty.net
